Medical Test Records

Group 10:
Sara Machado, 86923
Rafael Figueiredo, 90770
Ricardo Grade, 90774

Objectives

- System that allows to gather and store sensitive information from patients.

- Hospital Server has different types of records;

- Employees have different roles;

- Partner Labs can write test result records;

- A test result must be stored in way that its authenticity can be verified;

- All requests to Hospital Server must pass by Policy Authoring to either accept or deny the request;
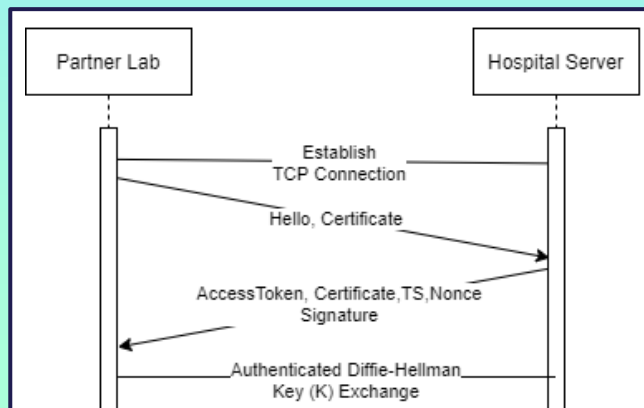

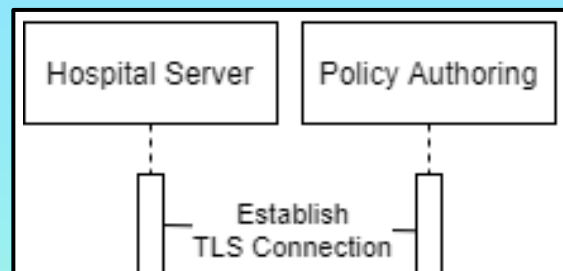

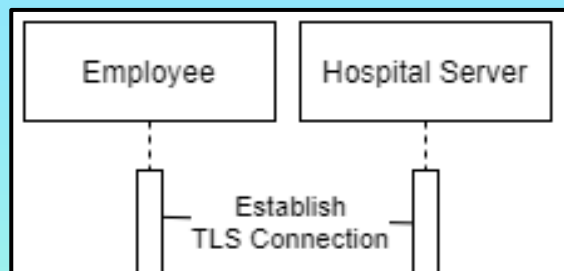

- Policy Authoring must be externalized.
